This Special Issue focuses on the analysis, design and implementation of hybrid energy storage systems across a broad spectrum, encompassing different storage technologies (including electrochemical, ...

What is the least-cost portfolio of long-duration and multi-day energy storage for meeting New York's clean energy goals and fulfilling its dispatchable emissions-free resource needs?

We have undertaken a thorough global analysis identifying 616,000 systems, available on a free government online platform. This immense pumped hydro resource demonstrates that low cost ...

Compact and light compared with traditional alternatives, these cutting-edge energy storage systems are ideal for applications with a high energy demand and ...

Atlas V contains updates to the carbon dioxide (CO₂) storage potential for the United States and updated information on DOE's carbon storage activities and ...

This work was authored by the National Renewable Energy Laboratory, operated by Alliance for Sustainable Energy, LLC, for the U.S. Department of Energy (DOE) under Contract No. DE-AC36 ...

Executive Summary The purpose of this report was to review pertinent literature and studies to identify the current state-of-the-art models and analytical tools that optimize the siting, sizing and economic ...

NLR develops world-class datasets, maps, and interactive data viewers that characterize energy resources with geographic precision. These publicly available resources offer a foundational ...

We found 616,000 potentially feasible PHES sites with storage potential of about 23 million Gigawatt-hours (GWh) by using geographic information system (GIS) analysis.
