This report uses data from the EIA to analyze solar and wind capacity and generation over the past decade (2014 to 2023) in all 50 states and the ...

As a result of new solar projects coming on line this year, we forecast that U.S. solar power generation will grow 75% from 163 billion ...

Data on renewable power capacity represents the maximum net generating capacity of power plants and other installations that use renewable energy sources to produce electricity.

The mix of all renewables (wind, solar, hydropower, biomass, and geothermal) produced 9.6% more electricity in 2025 than a year earlier and accounted for 25.7% of total US electricity ...

Among all technologies, wind is impacted most, with both offshore and onshore capacity growth revised down by almost 60% (57 GW) over the forecast period. The forecast for solar PV capacity has been ...

In combination, wind and solar now contribute 37EJ to the global energy system, up 15% year-on-year. Their combined output has grown at an ...

Prospective utility-scale solar and wind capacity -- projects that have been announced or are in the pre-construction and construction phases -- ...

Natural gas-fired power plants make up the largest share of capacity at 39,689 MW (45 percent) of the state total. Total renewable generation capacity is 32,925 ...

EU statistics provide an analysis of the electrical capacity for wind and solar photovoltaic power.
