This project aims to implement a battery energy storage system (BESS) for EPBIH, aimed at enhancing the decarbonisation of the energy sector in Bosnia and Herzegovina.

The Megapack architecture supports a wide range of DC/AC (solar PV) and power-energy (storage) ratios, providing the flexibility to optimize for any PV plus storage use case.

Bosnia and Herzegovina has seen 12% annual growth in renewable energy capacity since 2020. But here's the catch - solar and wind farms can't operate 24/7. The Banja Luka storage project acts like ...

The country is preparing to install its first battery energy storage system - with a capacity of up to 120 MWh. This is a huge step towards energy ...

For Banja Luka and surrounding regions, energy storage isn't just about technology - it's about securing reliable power, enabling clean energy growth, and building climate resilience.

Bosnia and Herzegovina is investing EUR700 million to upgrade its power grid and will need 225MW of energy storage to support the integration of 2.5GW of wind and solar power by 2030.

Bosnia and Herzegovina stands at a pivotal juncture: renewable deployment, especially solar, is racing ahead, and market rules have developed to accommodate storage and aggregation.

Bosnia and Herzegovina as an isolated country. Two regions based on geo-political entities distinguished. Hourly profiles for electricity demand and capacity factors of PV, wind and hydro power plants. [1] ...

Based on these considerations, the energy efficiency goals in Bosnia and Herzegovina for energy consumption savings by applying energy efficiency measures, for the period by 2030, are as follows:

Bosnia and herzegovina energy storage for backup power
