Bosnia and Herzegovina stands at a pivotal juncture: renewable deployment, especially solar, is racing ahead, and market rules have developed to accommodate storage and aggregation.

This project aims to implement a battery energy storage system (BESS) for EPBIH, aimed at enhancing the decarbonisation of the energy sector in Bosnia and Herzegovina.

This paper gives a comprehensive analysis of the economic viability of two of the currently most cost-effective electricity storage technologies: pumped hydro storage (PHS) and ...

In the long run, the World Bank estimates that BiH's energy sector would require more than \$6 billion in investment for modernization, life extension, and new generation facilities for the ...

The final outcome of this document is a strategic analysis and a review of the strategic energy priorities of Bosnia and Herzegovina in its key segments, with a focus on several indicative scenarios for the ...

Energy storage is considered a key solution to manage the mismatch between generation and consumption. Battery systems, in particular, can store excess power during low-demand periods ...

Some of the energy found in primary sources is lost when converting them to useable final products, especially electricity. As a result, the breakdown of final consumption can look very different from that ...

While both expect increased energy demand by 2030, the NDC anticipates a rise in transport's share and a decrease in other sectors, whereas the NECP projects increased shares across most sectors, ...

This article explores why energy storage systems are becoming indispensable for the region's energy transition, offering actionable insights for policymakers, businesses, and renewable energy developers.

Bosnia and herzegovina energy storage for demand response

This infographic summarizes results from simulations that demonstrate the ability of Bosnia-Herzegovina to match all-purpose energy demand with wind-water-solar (WWS) electricity and heat supply, ...
