In summary, several technological, environmental and political forces stimulate the use of the decentralized energy concept, in small scale, clean and renewable. This patent presents an...

The pilot project aims to help keep power running for all its customers. Through American Independent Power, the facility will use solar heat combined ...

Renewable ammonia production from solar-powered utilities (like photonic, solar thermal, and solar PV) can be an alternative to fossil fuel-based ammonia synthesis.

This study develops a self-sufficient system that can passively capture water and produce plant nutrients from the air through the integration of ...

The prototype, outlined in a Stanford-led study published Aug. 19 in *Nature Water*, recovers a valuable fertilizer from urine, using solar energy that can also provide power for other uses.

This energy can be used to generate electricity or be stored in batteries or thermal storage. Below, you can find resources and information on the basics of solar radiation, photovoltaic and concentrating ...

Nitricity is using solar electricity to extract nitrogen directly from our air to produce nitric acid, the most critical nutrient in fertilizer that plants use to ...

Nitrogen production using solar energy combines sustainable energy generation with advanced nitrogen generator technology. Solar panels generate electricity that drives compressors for nitrogen ...

Solar energy is created by nuclear fusion that takes place in the sun. Fusion occurs when protons of hydrogen atoms violently collide in the sun's ...
