A Power Distribution Unit (PDU) is a device that helps manage the flow of electricity within a data center. It takes power from a main supply and ...

Unlike basic power strips, a PDU delivers high-capacity, stable power distribution, making it suitable for servers, storage systems, and networking equipment.

Customized BDUs and PDUs optimize power distribution, safety, and monitoring for electric vehicles and energy systems. Tailored designs address diverse needs, ensuring efficient, ...

Power Distribution Unit (PDU) We have the products, technology, and expertise to provide optimal e-Mobility solutions.

PDUs (Power Distribution Units) ensure efficient power management for data centers and IT environments, providing reliable distribution, monitoring, and ...

Let's face it: electricity is the unsung hero of our daily lives. But what happens when the grid hiccups or your solar panels decide to nap during a cloudy day? Enter the energy storage PDU ...

In a typical Data Center power chain, PDUs follow UPS systems and generators, providing the final point of distribution before reaching Remote Power Panels (RPPs) or directly to equipment.

PDUs serve as the backbone of electrical power delivery in modern data centers, distributing utility or uninterruptible power supply (UPS) feeds to racks of servers, networking ...
