-----

Finland's large-scale solar capacity more than doubled in 2025, buoyed by the commissioning of the country's first solar projects larger than 50 ...

Solar power is a key part of Finland's and Europe's green transition. Yet its rapid expansion may bring unintended consequences: a new study shows that large-scale deployment of ...

This project marks an important step forward in Finland's transition to a more sustainable energy mix. By expanding solar capacity alongside wind power, EPV is helping to diversify the ...

Thanks to its cool climate, abundant land, and solar radiation levels on par with northern Germany, Finland is unexpectedly well-suited to solar - especially ...

Become a solar electricity producer and rent a panel from our solar power plant. We offer you an easy way to influence the amount of renewable energy in Finland: ...

When solar power is combined with energy storage and smart grid technologies, it improves the flexibility of the electricity grid. Solar panels can be ...

Solar power is purely produced domestic electricity: it strengthens energy self-sufficiency, promotes society's separation from foreign fossil energy, accelerates electrification, and brings work and ...

“Finland's advantage is its low atmospheric temperature, which improves the efficiency of solar photovoltaic cells. The colder it gets, the better the solar panels work. Solar panels can also ...

Modern solar panels are not only more efficient but also more affordable, making them capable of generating electricity even in Finland's ...
