Here, we compile a large global dataset of geothermal gradients in sedimentary basins, and analyzed the relationships between geothermal gradients and relevant independent tectonic ...

Includes three map plates, two report documents, a geothermal gradient database, and GIS geospatial data files that the interpretive geothermal gradient maps and ...

These static U.S. maps illustrate geothermal power plants, resources for enhanced geothermal systems, and hydrothermal sites. They may be used in electronic and printed ...

The results will be a geothermal gradient database and atlas that are significantly more accurate than those in use today.

This is a temperature-at-depth model for the conterminous United States, spanning depths of 0-7 kilometers. It was developed using various physical quantities as inputs to a physics-informed graph ...

OverviewHeat sourcesHeat flowDirect applicationVariationsNegative geothermal gradientGeothermal gradient is the rate of change in temperature with respect to increasing depth in Earth's interior. As a general rule, the crust temperature rises with depth due to the heat flow from the much hotter mantle; away from tectonic plate boundaries, temperature rises with depth at a rate of about 25-30 $^{\circ}\text{C}/\text{km}$ (72-87 $^{\circ}\text{F}/\text{mi}$) near the surface in the continental crust. However, in some cases the temperature may drop ...

Geothermal gradients from published temperature/depth measurements in drill holes generally deeper than 600 m are used to construct a temperature gradient map of the conterminous United States. ...

Geothermal gradient map of the United States published by the Hot Dry Rock (HDR) Geothermal Program of the Department of Energy, showing ...

Explore comprehensive geothermal maps and global data with advanced modeling tools for risk assessment

Geothermal gradient map

and site analysis. Ideal for industry and research use.
