---

1970s: Photochemist, Dr. Elliot Berman, along with oil company Exxon Corporation, designed a solar cell that greatly reduced the price of solar ...

Some of the earliest uses of solar technology were actually in outer space, where solar was used to power satellites. In 1958, the Vanguard I ...

o 1802 - Vasily Vladimirovich Petrov developed the first persistent electric arc. o 1802 - William Murdoch illuminates the exterior of the Soho Foundry with gas. o 1805 - Philips and Lee's Cotton Mill, Manchester was the first industrial factory to be fully lit by gas.

Paul MacCready builds the first solar-powered aircraft--the Solar Challenger--and flies it from France to England across the English Channel. The aircraft had over 16,000 solar cells mounted on its wings, ...

Humans first used solar power as early as the 7th century B. C. when they used magnifying glass to focus sunlight onto shiny objects. Later, in ...

In the 7th century B.C., humans discovered that sunlight could be ...

In 1958, The Vanguard I satellite used a one-watt panel to power its radios. Vanguard II, Explorer II, and Sputnik-3 all used solar technology in that same year.

In his research, Hertz discovered that more power was created by ultraviolet light than visible light. Today, solar cells use the photoelectric effect to convert ...

In 1958, the Vanguard I satellite used a tiny one-watt panel.

The earliest instances of harnessing solar energy are found in the seventh century BC when glass was used to
