This study investigates the mechanical response of bifacial glass-glass photovoltaic modules subjected to snow-type loading, with a particular focus on the influence of silicon cell spacing ...

Several interrelated factors increase the risk of glass failure in modern solar panels. These range from technological advancements to ...

In this pv magazine Webinar, quality assurance experts from PI Berlin examine how this glass breakage occurs, and what can be done ...

Module manufacturers are using thinner glass, in part, to lessen the load and costs of ultra-large-format PV modules. Thinner glass ...

Usually, glass breakages are very noticeable. However, they can easily be overlooked if they occur at the edge directly at the transition to the ...

Currently, the best method for identifying and mitigating PV module glass cracks is manual site walks, where technicians visually ...

This work compares commercially available TOPCon photovoltaic (PV) module types from five different manufacturers in a variety of electrical characterization and ...

In a feature article for PV Tech Power (Q3 2025), David Devir, principal engineer for VDE Americas, looks at the origins of today's ...

The takeaway is that glass breakage isn't caused by one thing, it's caused by five or six things happening at once: a slightly bent module, ...

How to deal with the deformation of photovoltaic panel glass

Dual-glass PV modules are experiencing low-energy glass fracture under expected conditions of use at an alarming rate. David Devir of VDE Americas looks at the ...
