On December 16, 1707, Mount Fuji, Japan, erupted for the last time to date. It is still an active volcano!

OverviewGeologyEtymologyHistoryGeographyAokigahara forestAccessIn cultureMount Fuji is located at a triple junction trench where the Eurasian Plate, North American Plate, and Philippine Sea Plate meet. These three plates form the western part of Japan, the eastern part of Japan, and the Izu Peninsula respectively. The Pacific Plate is subducting beneath these plates, resulting in volcanic activity. Mount Fuji is located near three
