Enhancement of Photoactivity of TiO₂ for Potential Applications in CO₂ Conversion and Water Splitting: A Hybrid Density Functional Theory Study. The Journal of Physical Chemistry C ...

The work presented here is significant and provides a valuable example of enhancing photovoltaic performance by incorporating titanium dioxide (TiO₂) nanoparticles into a polymethyl ...

By harnessing the unique properties of titanium dioxide and selenium, this innovative approach not only boosts efficiency dramatically but also has the ...

Japan has made breakthrough in renewable energy by unveiling a new solar panel technology that could be up to 1,000 times more powerful than ...

The major goal of this study is to achieve the cooling effect of a photovoltaic panel by employing titanium dioxide nanofluid as a cooling fluid in two passes circulation to lower the panel ...

Building upon existing research on titanium dioxide (TiO₂) nanoparticle coatings, our study investigates their super-hydrophilic and anti-soiling characteristics to ...

Titanium dioxide (TiO₂) has long been receiving attention as a promising material for enhancing the performance of photovoltaic devices due to its tunable optoelectronic properties.

A study from 2021 has unlocked the path towards affordability and production of the first invisible solar cells by coupling unique properties of titanium dioxide (TiO₂) and nickel oxide (NiO).

Developed by scientists at the University of Tokyo, these new solar panels combine layers of titanium dioxide and selenium, promising to be up to ...

Is titanium dioxide good for photovoltaic panels
