“It is reasonable to expect that, when fully operational, all new renewable energy plants will already be installed with integrated storage systems. And where the market does not cover the...

As Italy's energy mix is increasingly composed of variable renewable energy sources, electricity storage will be needed to integrate power generated by renewables into the national grid ...

Italy's new energy decree aims to cut consumer electricity bills, but industry experts warn it could slash solar revenues by over 30%, slow the PPA and battery storage markets, and increase ...

Italy's renewable energy production capacity has seen strong growth in recent years, with a compound annual growth rate (CAGR) of 4.6% from 2019 to 2023, driven particularly by the expansion of solar ...

The aim of this study is to investigate the long-term planning of the Italian power sector from 2021 to 2050. The key role of photovoltaic and wind technologies in combination with power-to ...

Energy transition - the need to achieve progressive and complete decarbonisation by 2050 - presents Italy with important challenges in increasing energy production from renewable ...

As more renewables come online, energy storage is becoming essential. Italy is investing in large-scale batteries and pumped hydro to boost ...
