formatsUsesPerformanceLifespanSafetyOne of the earliest examples of research into lithium-ion batteries is a  
CuF 2/Li battery developed by NASA in 1965. The breakthrough that produced the earliest form of the  
modern Li-ion battery was made by British chemist M. Stanley Whittingham in 1974, who first used titanium  
disulfide (TiS 2) as a cathode material, which has a layered structure that can take in lithium ions without  
significant changes to its crystal structure. Exxon tried to commercialize this battery in the late 1970s, but  
found the synthesis ex...
