But the electricity mix -- the balance of sources of electricity in the supply -- is becoming increasingly important as countries try to shift away from fossil fuels ...

Without access to competitive electricity contracts, they will be forced to rely on CFE's less efficient and more expensive power, potentially undermining Mexico's attractiveness as a destination for energy ...

Electricity supply in Mexico relies heavily on thermal sources (75%), followed by hydropower generation (19%) and geothermal energy (2%). This is changing as ...

Electrical coverage reached 99.43% of the population in 2023, with 743,685 people still lacking access. In 2023, 4,648 electrification projects were carried out, with ...

Regional and country-specific distribution models in Mexico are evolving to address geographic, infrastructural, and socio-economic variations.

The LESE regulations set out the minimum requirements for long-term production projects under which a private party owns a power plant whose electricity is sold exclusively to the CFE.

OverviewHistory of the electricity sectorElectricity Supply and DemandAccess to electricityService QualityResponsibilities in the Electricity SectorRenewable Energy ResourcesTariffs, Cost Recovery and SubsidiesThe first overhead power line was built from Necaxa to Mexico City and El Oro de Hidalgo in 1905, when the hydroelectric plant in Necaxa opened. This 60 kV power line also was the world's longest power line in 1905. Despite the age, parts of the power line are still in service. Around 1930, central Mexico already had an interconnected grid.
