The Transmission System Operator of Cyprus (TSOC) predicts that transmission and distribution grid operators will need to curtail 28% of the nation's annual green energy production in 2024.

The DYNAMO project aims to develop a decentralized platform for energy exchange in microgrids, which will be implemented in a pilot location by the Electricity Authority of Cyprus, ...

New project co-financed by the European Regional Development Fund and the Republic of Cyprus through the Research and ...

Essentially, the main aim of the ELECTRA project is to pave the way for increased penetration of distributed generation (DG) systems (predominantly solar photovoltaic systems), to be ...

It will facilitate the design, development and demonstration of a future-proof active smart micro-grid system as well as to integrate and ...

A new research project aimed at developing a decentralised energy management platform for microgrids has launched in Cyprus, ...

Despite the significant increase in capacity, Cyprus is struggling to fully utilise the energy produced by its RES infrastructure. ...

The DYNAMO project aims to develop a decentralized platform for energy exchange in microgrids, which will be implemented in a pilot location by the Electricity Authority of Cyprus, ...

A digital twin of the UCY microgrid has been implemented to facilitate the effective analysis of the operational state of the power ...

The Low Voltage Experimental Microgrid Laboratory (LVEM lab) at the FOSS Centre of the University of

Microgrid development cyprus

Cyprus (UCY) is a flexible and scalable ...
