---

In the specific case of throw, `throw new()` is a shorthand for `throw new Exception()`. The feature was introduced in `c# 9` and you can find the documentation as Target-typed new expressions. ...

The new keyword in JavaScript can be quite confusing when it is first encountered, as people tend to think that JavaScript is not an object-oriented programming language. What is it? What problems ...

Note that if you declared `var a = new { };` and `var o = new object();`, then there is one difference, former is assignable only to another similar anonymous object, while latter being object, it ...

`83 new()` describes a constructor signature in typescript. What that means is that it describes the shape of the constructor. For instance take `{ new(): T; }`. You are right it is a type. It is the type of a class ...

A new expression is the whole phrase that begins with new. So what do you call just the `"new"` part of it? If it's wrong to call that the new operator, then we should not call `"sizeof"`; the sizeof ...

Ah, but new experts will rise up and embrace the new, friendly Stack Overflow that they have always wanted. And maybe rediscover the same things the bitter, hateful old guard found.

You should use new when you wish an object to remain in existence until you delete it. If you do not use new then the object will be destroyed when it goes out of scope.

It is NOT "bad" to use the new keyword. But if you forget it, you will be calling the object constructor as a regular function. If your constructor doesn't check its execution context then it won't notice that "this" ...

The new operator uses the internal `[[Construct]]` method, and it basically does the following: Initializes a new

# New zealand market price for earthquake-resistant integrated energy storage cabinet

native object Sets the internal [[Prototype]] of this object, pointing to the Function prototype ...
