OverviewStructurePerformanceSynthesisHistoryPropertiesUsageLithium nickel manganese cobalt oxides (abbreviated as Li-NMC, LNMC, NMC, or NCM) are mixed metal oxides of lithium, nickel, manganese and cobalt with the general formula  $\text{LiNi}_x\text{Mn}_y\text{Co}_{1-x-y}\text{O}_2$ . These materials are commonly used in lithium-ion batteries for mobile devices and electric vehicles, acting as the positively charged electrode, commonly called the cathode (though when charging it is actually the anode). ...

NMC 811 batteries represent a significant milestone in nickel and NMC battery evolution. With a composition of 80% nickel, 10% cobalt, and 10% manganese, these batteries deliver ...
