Learn more about the robust base station antenna solutions from PCTEL designed for cellular applications supporting 2G-5G, LTE, & CBRS connectivity.

Small cells can be used to provide in-building and outdoor wireless service. Mobile operators use them to extend their service coverage and/or increase network capacity.

In dense city centers, LTE small base stations fill coverage gaps caused by high-rise buildings and narrow streets. They improve indoor and outdoor signal strength, reducing dead zones.

eNodeB JRC eNodeB has been specifically designed for Private LTE. It is a Best-in-Class base station in the market. The design is self ...

EPS foam boards are used, featuring low thermal conductivity and high strength. Columns, shelves, L-shaped brackets, lighting fixtures, door magnetic sensors, and installation accessories. The cabinet ...

CableFree offers Band 46 5GHz LTE Base Station and Outdoor CPE devices for operation in Unlicensed 5GHz spectrum, enabling smaller operators and private customers to build LTE without ...

New street and outdoor small-cell solutions from Ericsson can be mounted on existing infrastructure. They are fast to install, with a subtle footprint, and secure the 5G experience.

Learn how macrocells, small cells and femtocells differ in coverage, cost and performance -- and how each supports modern 5G networks.

Small cells are typically installed indoors or outdoors, and they are designed to complement the coverage of macrocell base stations, which provide ...

Experience CableFree's 4G & 5G LTE Small Cell outdoor base ...
