-----

An engineering example of flexible photovoltaic support with a span of 15m is calculated and analyzed, and then compared with the finite element calculation results.

In order to respond to the national goal of "carbon neutralization" and make more rational and effective use of photovoltaic resources, combined with the actual photovoltaic substation project, a fixed ...

Based on the proposed field modal testing and modal parameter identification method, the high-order modal parameters of flexible PV support structure are identified in the first time.

Monitoring photovoltaic flexible structures is essential to ensuring their reliability and stability. Real-time monitoring and analysis enable the early detection of potential issues, helping to ...

To improve the span and stiffness and widen the application scene of the flexible photovoltaic support system, a new type of three-dimensional cable-truss flexible photovoltaic support system is proposed ...

**Abstract** The flexible support photovoltaic module structure system has advantages such as large span, fast construction speed, and suitability for complex environments. However, this kind ...

In this paper, we mainly consider the parametric analysis of the disturbance of the flexible photovoltaic (PV) support structure under two kinds of wind loads, namely, mean ...

In recent years, the proportion of flexible photovoltaic (PV) support structures (FPSS) in PV power generation has gradually increased, and the wind-induced response of ...

The flexible PV support structure, serving as an efficient and flexible solar power generation support system, mainly consists of five key components: horizontal force-bearing ...

The application relates to the field of tracking type photovoltaic supports, in particular to a large-span flat single-axis tracking type flexible photovoltaic support system.
