Recently, a device called an electric spring has been introduced to respond to the load dynamics and improve the voltage profile in the microgrid. ...

Finally, the effectiveness and feasibility of the proposed control strategy are verified by building a "wind light storage load" microgrid simulation model on the MATLAB / Simulink platform.

However, power imbalance often leads to fluctuations in voltage and frequency, which inhibit the development of AC microgrids. To overcome such problems, this paper proposes an optimized full ...

To overcome such problems, this paper proposes an optimized full-bridge converter energy storage structure to realize power balance and ...

In the presence of the stochasticity of renewable generation and load demand, the power balance for MicroGrid should be guaranteed by employing real-time control of the charging/discharging power of ...

In this paper, the hierarchical power balance of new energy microgrid is analyzed by fuzzy control method, and the corresponding model is constructed, and the corresponding model is verified and ...

To address the power imbalance problem of microgrids, this paper proposed an energy storage circuit structure of a full-bridge converter from the perspective of inverter and ca-pacitor charge/discharge, ...

To enhance the reliability of the microgrid system and ensure power balance among generation units, this paper proposes a power coordination control strategy based on reconfigurable ...

This paper presents a holistic data-driven power optimization approach based on deep reinforcement learning (DRL) for microgrid control, considering the multiple needs of ...
