---

“The precision of prefab cement piers let us achieve perfect module alignment - something that was hit-or-miss with driven piles,” explains project lead Maria Gonzalez.

Faddis is catering to rising demand by making precast concrete ballasts, also called footings or foundations, for PV solar collector rack systems. There are a variety of designs in use.

APA Solar is a leading U.S.-based solar racking manufacturer specializing in engineered foundation and mounting solutions for commercial and utility-scale ground-mount solar projects.

Patent application FR2687704 presents a foundation based on a prefabricated concrete formwork with thin walls that are subsequently concreted "in situ" along with a reinforcement frame.

Let's face it - when most people picture solar panel installations, they imagine shiny panels and futuristic tech, not the humble prefabricated cement pier photovoltaic support beneath them.

Solar Foundations USA is the single source solution to meet your solar panel support structure needs. We offer engineering and design, foundation systems, racking components and efficient installations.
