LAS VEGAS -- Engineers have showcased a prototype electric vehicle (EV) that can drive for up to 40 miles (64 kilometers) per day using just ...

Jackery AI-Powered Self-Driving Power Station Goes Where the Sun Shines Much like a robotic lawn mower, the power station moves on its own, follows the sun, and recharges itself using ...

With 400 miles of range and no need for constant charging, it could be a game-changer for people traveling long distances in sunny conditions. The ...

The Aptera PI2 operates primarily as a solar-powered electric vehicle (sEV), designed to capture solar energy to charge its battery and keep it moving ...

Bako Motors is building compact electric cars and cargo vans with solar panels on the roof, letting them charge directly from ...

Discover how solar energy is revolutionizing autonomous vehicles by providing clean, renewable power through advanced solar panels and smart energy systems.

In an impressive feat, the students' electric, solar-powered car recently completed a 620-mile trek without ever needing to stop and recharge.

Harness the power of the sun with Aptera. Designed with ~700 watts of integrated solar cells, drive up to 40 miles per day completely off the grid and enjoy 400 ...

With up to 700 watts of integrated solar cells covering the body, the Aptera can generate up to 40 miles of free, solar-powered driving per day. For many commuters, this means you may never...

Explore the transformative impact of autonomous vehicles and solar energy on sustainable transportation. This

Solar power self-driving

comprehensive guide delves into the integration of photovoltaic ...
