Under the European Green Deal and the REPowerEU plan, solar power is a building block of the EU's transition to cleaner energy. Its accelerated ...

Since then, the European Union's solar capacity surpassed 100 GW in 2018 and reached the 200 GW milestone in 2022. It exceeded 260 GW in 2023, and the growth trend is only expected to continue.

As of 2023, the European Union (EU) boasts a total installed solar capacity of approximately 263 gigawatts (GW), making it the second-highest ...

Wind and solar generated more EU electricity than fossil fuels for the first time in 2025, marking a "major milestone" in the transition to clean power. A ...

Developers deployed 65.5 GW of solar across the European Union in 2024, according to SolarPower Europe "s " EU Market Outlook for Solar ...

Find the most up-to-date statistics about the solar photovoltaic industry in Europe

Explore Europe's 2024 solar boom, with gigawatt-scale projects in Germany, Spain, and beyond driving a historic shift in the continent's energy landscape.

Solar now provides more than one-fifth of electricity in countries including Hungary, Spain and the Netherlands. Europe's electricity mix is now mostly low-carbon, with renewables and nuclear...

SPE expects EU solar installations to fall to 64.2 GW in 2025, ending its decade-long growth streak. Falling power prices and incentive cuts hit residential solar in several markets, including the top ones ...
