---

Almost 70 gigawatts (GW) of new solar generating capacity projects are scheduled to come online in 2026 and 2027, which represents a 49% increase in U.S. solar operating capacity ...

Across all regions, developing a skilled workforce and setting ambitious solar and storage targets are essential tasks. In these times of political uncertainty, low-cost solar power could turn into ...

The US solar industry installed 11.7 gigawatts-direct current (GWdc) of capacity in the third quarter of 2025, a 20% increase from Q3 2024 and a 49% increase compared with Q2 2025.

It examines the current state of solar power and related academic solar energy research in different countries, aiming to provide valuable guidance for researchers, designers, and policymakers ...

Explore the future of solar in 2025--key trends, new tech, and policies driving global clean energy growth.

Discover all statistics and data on Global solar energy outlook now on statista !

We aim to provide a comprehensive understanding of methodologies, datasets, and recent advancements for enhancing predictive accuracy in solar power generation forecasting.

That expected growth is down from the record 37 gigawatts of solar power capacity that was added in 2024 and may dwindle further as some analysts believe that solar power may face ...

As the energy crisis fueled by Russia's invasion of Ukraine has subsided, demand for residential solar systems in the EU has declined and several residential solar incentive schemes ...

Policymakers in some of the world's largest economies are reducing support for solar power generation. Even so, Goldman Sachs Research expects ...
