The first known practical wind power plants were built in Sistan, an Eastern province of Persia (now Iran), from the 7th century. These "Panemone" were ...

The first large (utility-scale) wind farms are installed in California. As a result, many important lessons are learned, such as greater awareness of environmental affects and proper siting--where wind ...

We review the development of wind turbines for generating electricity from the late 19th century to the present, summarizing some key ...

The first modern wind farm, consisting of 20 turbines, was built in 1980 in New Hampshire's Crotched Mountain. These early turbines produced ...

We're in the middle of a wind-power boom. Installed capacity has increased from just over 4,000 MW in 2001 to close to 70,000 MW today. This happened once ...

The world's first offshore wind farm, Vindeby, was built in 1991 in Denmark with 11 450kW turbines. With a total installed capacity of 5 megawatts (MW), this covered the annual consumption of 2,200 Danish ...

Follow the history of wind from windmills to modern day wind turbine generators. Information covering ancient wind power history to present day wind technology.

People used wind energy to propel boats along the Nile River as early as 5,000 BC. By 200 BC, simple wind-powered water pumps were used in China, and windmills with woven-reed ...

Gathered in large wind farms close to Los Angeles and San Francisco, wind turbines at first between 25 and 65 kW and later above 100 kW were installed. By 1985, there were more than ...
