A solar air conditioning unit entails the design, integration, and performance evaluation of a system that harnesses solar energy to provide space cooling. This study focuses on the ...

Results eventually show that using ERW along air path of desiccant-assisted DOAS may save primary energy between 7.5 to 20.9% compared to evaporative cooling and ...

Air conditioning in the summer months is putting more and more pressure on the electrical grid. To address this problem, a new research project has developed a low-cost, ...

This paper presents and discusses a general overview of solar cooling and air-conditioning systems (SCACSs) used for building applications. The popular SCACSs driven by ...

Results of this study reported 58.9% energy savings compared to conventional design under the 20% fresh air ratio. They also highlighted that with an increase in the fresh ...

The study titled "Techno-economic analysis of a hybrid solar air conditioning system for industrial applications" by Chen et al. (2019) Offers a complete technological and monetary assessment ...

Some research gaps, recommendations, and conclusions are derived from the reviewed literature to understand and further develop ...

The working theories and components of several solar air conditioning systems, including hybrid, adsorption, and absorption systems, are thoroughly reviewed in this research. ...

Over the past years, a large number of research studies have been carried out on modelling, simulation, design and optimisation of ...

The most EK research results of solar air conditioning

An experimental platform of solar powered air conditioning with microencapsulated phase change material (MEPCM) cooling storage system was carried out to evaluate the ...
