In 2025, capacity growth from battery storage could set a record as we expect 18.2 GW of utility-scale battery storage to be added to the grid. U.S. battery storage already achieved record ...

In this blog, we'll cover what is driving the unprecedented ...

Sometimes energy storage is co-located with, or placed next to, a solar energy system, and sometimes the storage system stands alone, but in ...

The National Renewable Energy Laboratory (NREL) publishes benchmark reports that disaggregate photovoltaic (PV) and energy storage (battery) system installation costs to inform ...

The full Energy Storage Market Outlook includes the analysis from our Executive Summary plus insight and analysis into market segments, state and federal policy updates, ...

Each quarter, we gather data on US energy storage deployments, prices, policies, regulations and business models. We compile this information ...

Solar and battery storage are set to account for 79% of 86 GW of new utility-scale capacity planned in the United States in 2026, marking the largest annual increase in more ...

Despite federal policy uncertainty surrounding clean energy, grid-scale battery installations increased by nearly one-third, according to the latest data from the Solar Energy ...

From Texas-sized utility projects to skyrocketing residential battery attach rates, 2026 marks the year solar and storage transition from the electric grid's fastest-growing ...

Energy storage has become an increasingly common component of utility-scale solar energy systems in the United States. Much of NLR's analysis for this market segment focuses ...
