Volume is defined as the 3-dimensional space enclosed by a boundary. Learn how to calculate a volume using a volume calculator, formulas, volume examples, and a FREE worksheet.

The definition of length and height (cubed) is interrelated with volume. The volume of a container is generally understood to be the capacity of the container; i.e., the amount of fluid (gas or liquid) that ...

volume applies to an aggregate without shape or outline and capable of flowing or fluctuating.

Calculate the volume of numerous regular shapes with ease using our versatile volume calculator. Need to calculate the volume of a box? Try this tool.

The volume of a 3D shape or geometric figure is the amount of space it contains. Volume is well-defined for many common shapes; the formulas for some common shapes are shown below.

This free volume calculator computes the volumes of common shapes, including sphere, cone, cube, cylinder, capsule, cap, conical frustum, ellipsoid, and more.

Volume is the amount of 3-dimensional space something takes up. ... Imagine how much water could be in it. ... Also called Capacity.

Find the volume of water or sand using different containers of varying shapes and sizes, by asking students to estimate and calculate the volume. Offer a wide range of exercises and problems for ...

Volume is measured in "cubic" units. The volume of a figure is the number of cubes required to fill it completely, like blocks in a box. Volume of a cube = side times side times side. Since each side of a ...

Volume is a measure of how much space an object takes up. For example two shoe boxes together have twice the volume of a single box, because they take up twice the amount of space.
