An individual process in an OS might only be allowed to reserve up to 4GB RAM or less, which means `size_t` would only need to be 32-bit while pointers are 64-bit. 32-bit wide `size_t` wouldn't necessarily ...

I found two ways to determine how many elements are in a variable... I always get the same values for `len()` and `size()`. Is there a difference? Could `size()` have come with an imported ...

The OP was asking "`Array.size()` vs `Array.length`". From the previous discussions, it was make clear, that the "size" Function is not part of standard JavaScript but implemented by libraries. ...

16 To change the size of (almost) all text elements, in one place, and synchronously, `rel()` is quite efficient: `g+theme(text = element_text(size=rel(3.5))` You might want to tweak the number a bit, to get ...

Available options: ... `max_split_size_mb` prevents the allocator from splitting blocks larger than this size (in MB). This can help prevent fragmentation and may allow some borderline ...

29 Making a powerpoint that's supposed to show a before and after of a website. Since it's currently a long website I'd rather make a single long slide to put it on (20" instead of 7.5"). But all the ...

I'm really curious why `shape` is an attribute of arrays and a function in the numpy model but not a method of array objects. Is there an obvious answer? Does it feel like it merits a separate SO ...

In several C++ examples I see a use of the type `size_t` where I would have used a simple `int`. What's the difference, and why `size_t` should be better?

If the size of the `int` is that important one can use `int16_t`, `int32_t` and `int64_t` (need the `iostream` include for that if I remember correctly). What's nice about this that `int64_t` should not have issues on a 32bit ...

What is the difference between `.size()` and `.length` ? Is `.size()` only for arraylists and `.length` only for arrays?
