To access additional data, including an interactive map of global wind farms, a downloadable dataset, and summary data, please visit the Global Wind Power Tracker on the Global Energy Monitor website.

On some days, wind energy covers more than 100% of some Member State's electricity demand. Find out how much wind was in the power mix yesterday.

Annual electricity generation from wind is measured in terawatt-hours (TWh) per year. This includes both onshore and offshore wind sources.

Wind power is the nation's largest source of renewable energy, with more than 150 gigawatts of wind energy installed across 42 U.S. States and Puerto Rico. These projects generate ...

wind power, form of energy conversion in which turbines convert the kinetic energy of wind into mechanical or electrical energy that can be used for power. Together with solar power and ...

Wind power is generated through the use of wind turbines, whose blades turn when the wind blows, which then spins a generator either directly or through a series ...

The Global Wind Power Tracker (GWPT) is a worldwide dataset of utility-scale, on and offshore wind facilities. It includes wind farm phases with capacities of 10 ...

The future is here, and China is taking the lead. A Chinese energy company has successfully tested a wind turbine that actually flies in the sky. Appearing like a giant blimp, it is ...

Wind flows over the blades creating lift (similar to the effect on airplane wings), which causes the blades to turn. The blades are connected to a drive shaft that turns an electric generator, ...
