The Theory Behind the Impact The Giant-Impact Hypothesis is the most widely accepted explanation for the Moon's formation. According to this ...

The Theia impact is believed to have significantly altered Earth's rotation, likely increasing its speed and tilting its axis. This tilt is responsible for the seasons we experience today.

You may have heard of Theia, a Mars-sized object thought to have struck the young Earth and produced the Moon. If Theia (or a similar body) ...

The thinking that lead to his research is ingeniously simple: If Theia hit Earth, it didn't vanish; it would have merged with our planet, and there must ...

Over 4.5 billion years ago, a giant body smashed into Earth in a cosmic collision that birthed our planet's loyal companion, the moon. Now, new ...

Around 4.5 billion years ago, a planet called Theia is thought to have smashed into newborn Earth. The messy collision kicked up debris, which ...

One fateful day about 4.5 billion years ago, a Mars-sized body called Theia collided with proto-Earth, turning both into a molten mess of rock and metal. Once the ...

Theia slammed into Earth and ultimately spun off some of the materials mixed between the two bodies to form the Moon.

Theia, an ancient planet, collided with Earth to form the moon, scientists believe. A new study suggests Theia could have also formed ...
