Solar farms installed in deserts or low value pasture lands has always been the textbook image portrayed. Now they are here in force, and builders ...

This is why farmers are doing something just a little bit odd - purposefully covering their crops with solar panels as many crops, actually grow ...

In debates about renewable energy, it is often claimed that installing solar panels on farmland renders it unusable for agriculture - taking ...

Why not solar?" he asks. "Farmers farm the sun. It's what we do. Corn stores energy in the kernel. In order to release it, we have to process it. That's not terribly efficient," he explains. But ...

One of the largest barriers of entry for new and young farmers is access to land. Subsidized solar farms have made it more difficult for farmers to ...

Locating solar energy on farmland could significantly increase the available land for solar development, while maintaining land in agricultural production and expanding economic opportunities for farmers, ...

Explore 10 reasons why industrial-scale solar isn't right for agricultural-rural areas, from storm water concerns, the environmental concerns, soils concerns, loss of ...

Driven by subsidies, mandates and federal and state policies compelling the use of more renewable energy, solar energy facilities are now displacing farmland at an increasing rate.

Solar energy can be a great tool in the reduction of greenhouse gases, but it risks decommissioning our most productive agricultural lands. As ...
