Global wind power generation forecast (TWh) from 2022 to 2030 including 2030 market share by country.

“From the first MW-scale turbine in 1941 to 16 GW in 2000, then 1 TW in 2023, we're now racing toward 2 TW by 2030. While achieving historic scale, ...

By 2030, renewables would make up 72.9% of Canada's electricity capacity, up from 70.5% in 2025. Based on planned projects, Quebec will lead the country's growth in renewable ...

downgraded its global floating wind forecast and predicts 8.5 GW to be built globally by 2030, 22% lower than the previous year's projection. There is a lack of port infrastructure that can accommodate ...

Wind could provide almost as much generation as solar by 2030. Credit: fokke baarsen via Shutterstock. National targets add up to more than ...

The report explores one scenario for reaching 20% wind electricity by 2030 and contrasts it to a scenario in which no new U.S. wind power capacity is installed.

Explore the global wind power forecast for 2030 -- analyzing onshore and offshore trends, regional growth, and innovation shaping the renewable future.

Reaching 20% wind energy will require enhanced transmission infrastructure, streamlined siting and permitting regimes, improved reliability and operability of ...

By 2030, wind is projected to surpass hydropower in electricity generation. However, supply chain bottlenecks (especially for offshore projects) ...
